

## PERF-25 Demo Dolly

This dolly mounted unit is simple to get around and set up is done in a matter of minutes.  
The base dryer system is mounted to a rugged steel hand truck with large tires.  
This will enable you to drag it up and down steps or over any air hoses or curbs you may encounter in your travels through shops.

The demo package includes the hand truck, mounting hardware for dryer, and interconnecting fittings to attach the after filter to the dryer.

***NOTE: The PERF-25 Perfect Air® System is sold separately.***

*Some light assembly required. Stock of demo without blue piping may still be shipped.*

*Here are some step-by-step tips to get the most out of your PERF-25-DDEMO unit.*

1. Demo should start in priming area by testing existing air quality.
2. Spray panel or area with existing compressed air used for priming.
3. Spray additional panel or area with demo unit (shows faster dry).
4. Compare the sanding areas. When the primer that was sprayed with the RTi unit is sanded, it will sand easier and will not clog or plug the sandpaper.
5. Base coat the panel without demo and see flash time.
6. Base coat the panel with demo unit and see how flash time is 50-75% faster. The time savings are huge!

**Optional:** Run the hose in the booth and have the painter spray a repair.

Let them see how fast they can paint and how the job comes out.

They can buff the job and see how great their paint works when they use the Perfect Air® System.

The biggest selling point is what the unit can do for their production.
